words were pronounced every 20 to 180 seconds, followed by words of similar sound and words connected in meaning to the key word. In a semantic system, the key word stands as the center with a signalling meaning and evokes a motor and an orienting vascular reaction. This "nucleus" is surrounded by a system of potential sense-link words which evoke orienting reactions but no motor response. In normal subjects neutral words, and words of similar sound but unrelated in meaning, do not provoke any motor or vascular reactions. In mentally retarded children, the sound resemblance of words occupies the leading position in evoking responses. Semantic systems are not of a clear conscious nature. In adults, the presence of semantic

The equations of the theory of cylindrical shells used  
in the present paper are of an approximate character.  
They are based on the fact that the displacements  $u$  and  
 $v$  in the middle surface are neglected in computing the  
curvature and twist of the shell; the latter are ex-
